Note. s_i: planned episode start; D_i: planned duration (periods); M_i: non-advance milestones; ϕ_i: advance rate; ψ_i^{trig}: progress trigger for advance disbursement; ρ_i: advance recovery rate per milestone. Profit margin $\pi_i = 0.20$ throughout; contract price $P_i = 1.20 \times \mathrm{BAC}_i$. Efficiency sequences are fixed under seed $= 0$.
